

eSafety & Ethical Use of AI in the Classroom

A Guide for Teachers and Students on Navigating the Digital World Responsibly.

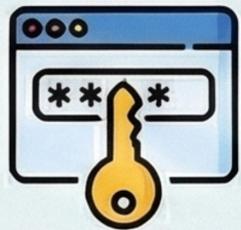

eSafety: Protecting Yourself & Your Data

Data Privacy is Paramount: Never share personal information (full names, addresses, passwords, photos) with AI chatbots. Treat them like public spaces.

Respect Age Limits: Most AI tools have age restrictions (often 13+ or 18+). Follow terms of service and obtain parental consent where required.

Secure Your Accounts: Use strong, unique passwords for AI tool accounts and always log out, especially on shared school devices.

Ethical Use: Being Responsible & Critical

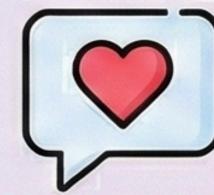

Be a Critical Thinker: AI can make mistakes or generate 'hallucinations.' Always verify facts and info with reliable, human-authored sources.

Uphold Academic Integrity: Use AI as a brainstorming partner or tutor, not to do your work for you. Acknowledge its use.

Be Aware of Bias: AI models can reflect biases from their training data. Be mindful of stereotypes and unfair representations.

Practice Digital Citizenship: Use respectful language. Do not use AI to generate harmful, bullying, or inappropriate content.
